

Cohort C – APR Initiative Alignment

Program/Degree	Assessment Year	Program Learning Outcomes/Student Learning Outcomes	Assessment Finding/Concern	Analysis of Assessment Results	Improvement Action Taken	Results of Improvement Action
Transportation, Distribution, Warehousing, and Procurement TC	2022-2023	PLO 1- Describe practical applications that address real-life challenges and opportunities in logistics and supply chain management. PLO 2- Describe the latest professional concepts of transportation management and apply them in a global supply chain environment. PLO 3- Demonstrate knowledge of the role warehouses and distribution centers (DCs) play in the supply chain.	As a new program, limited assessment data were available to establish student learning trends. Faculty identified a need to ensure textbooks and instructional materials reflected current industry practices and supported achievement of the program learning outcomes.	Faculty determined that reviewing course materials was necessary to ensure students were learning current practices across transportation, distribution, warehousing, and procurement. Updating materials would strengthen alignment between course content, industry expectations, and PLOs while establishing a stronger foundation for future assessment of student learning.	Reviewed textbooks and instructional materials across the logistics curriculum to identify needed updates based on changes in industry practices. Appropriate courses and instructional resources were updated to strengthen alignment with PLOs 1-3 and current workforce expectations.	Completed. Faculty completed a comprehensive review of textbooks and instructional materials and updated the appropriate courses to reflect current industry practices and strengthen alignment with PLOs 1-3. Future PLO assessment results will be analyzed to determine the effectiveness of the updated materials on student learning and identify any additional improvements needed
Health Information Management AAS	2022-2023	PLO 3- Manage standards and data for exchange of health information as they relate to informatics, analytics, and data use.	Review of the assessment process identified a need to strengthen alignment between PLO 3 and the course in which it was assessed. Faculty also identified Structured Query Language (SQL) terminology and query development as content requiring continued reinforcement.	Faculty analysis determined that assessing PLO 3 in HIMT 2309 would provide stronger alignment with the 2018 AHIMA Curriculum Competencies. Faculty also identified the AHIMA Informatics Toolkit and existing course resources as appropriate supports for reinforcing SQL terminology and query development.	Moved assessment of PLO 3 to HIMT 2309 beginning Fall 2023. Students were provided access to the AHIMA Informatics Toolkit and reminded of built-in course resources supporting SQL terminology and query development.	Following implementation, 8 of 9 students scored 100% on the PLO 3 assignment, while 1 student scored 75%, resulting in 90% of students meeting the established outcome. Faculty will continue to monitor PLO 3 results to determine whether the revised assessment placement and instructional resources support sustained student achievement.
Medical Coding TC	2022-2023	PLO 3- Identify policies and strategies to achieve data integrity.	Spring 2022 assessment results showed strong achievement, with 92% of students meeting PLO 3; however, faculty identified an opportunity to further strengthen students' application of legal and compliance concepts related to medical coding.	Faculty analysis of PLO 3 results identified a need for continued reinforcement of applied legal analysis and compliance decision-making, including accurate Present on Admission (POA) determinations. Strengthening these skills supports students' ability to apply coding requirements accurately and prepares them for professional certification expectations.	Continued targeted instruction and assessment of legal and compliance concepts with the goal of increasing student achievement of PLO 3 and strengthening application of coding requirements.	PLO 3 achievement increased from 92% in Spring 2022 to 94% in the subsequent assessment. The one Medical Coding TC student assessed earned a score of 94%, meeting the established outcome. Because the follow-up result represents only one student, additional PLO 3 data will be collected and analyzed to determine whether this level of achievement is sustained across future cohorts.

Program/Degree	Assessment Year	Program Learning Outcomes/Student Learning Outcomes	Assessment Finding/Concern	Analysis of Assessment Results	Improvement Action Taken	Results of Improvement Action
Radiologic Technology AAS	2022-2023	PLO 12- Students will demonstrate effective problem solving and critical thinking skills.	Program outcomes were generally strong; however, faculty identified an opportunity to strengthen students' preparation for the ARRT credentialing examination and identify learning gaps prior to graduation and licensure testing	Faculty analysis identified a need for an early measure of ARRT exam readiness to identify areas in which students may require additional support. Establishing a 70% benchmark on a mock ARRT examination provides an opportunity to identify learning gaps and provide targeted tutoring and remediation before students attempt the credentialing examination.	Require students to complete a practice mock ARRT examination and achieve a minimum score of 70% prior to taking the ARRT credentialing examination. Students who do not meet the benchmark receive additional support and remediation to address identified learning gaps.	The overall class average on the mock ARRT examination was 88.29%, exceeding the established 70% benchmark by 18.29 percentage points. The results demonstrate strong student performance on the practice examination and provide evidence of readiness for the ARRT credentialing examination. Future ARRT credentialing results will be reviewed to determine whether strong mock examination performance is reflected in certification outcomes.
Respiratory Care AAS	2022-2023	PLO 1- Demonstrate the ability to comprehend, apply, and evaluate clinical information relevant to their role as a Registered Respiratory Therapist (RRT). PLO 2- Demonstrate the technical proficiency in all skills necessary to fulfill the role as a Registered Respiratory Therapist (RRT). PLO 3- Demonstrate personal behaviors consistent with professional and employer expectations as a Registered Respiratory Therapist (RRT). PLO 4- Successfully meet employer expectations by competently performing skills required of a Registered Respiratory Therapist (RRT).	Assessment results showed strong overall achievement; however, faculty identified a need to strengthen students' hands-on clinical application and improve the number of students successfully completing laboratory check-offs within the expected number of attempts.	Faculty analysis of assessment results identified laboratory competency as an area for continued improvement. In RESP 1420, 80% of the 2022-2023 cohort successfully completed the Arterial Blood Gas Analysis check-off within two attempts, indicating an opportunity to strengthen students' clinical application and technical proficiency.	assessment courses RESP 2440 Mechanical Ventilation and RESP 1420 Fundamentals of Respiratory Care II, with emphasis on successful completion of the Ventilator Check and Arterial Blood Gas Analysis check-offs within fewer attempts.	The 2023-2024 cohort demonstrated measurable improvement in laboratory competency. The percentage of students successfully completing check-offs within two attempts increased by 13 percentage points from the 2022-2023 cohort. In addition, 100% of the cohort achieved SLO 1 by successfully completing the Ventilator Check and Arterial Blood Gas Analysis check-offs by the fourth attempt. These results demonstrate improvement in clinical skill performance following the targeted action.
Physical Therapist Assistant AAS	2022-2023	PLO 2- Demonstrate entry-level competence as physical therapist assistants as evidenced by successful completion of the National Physical Therapy Examination (NPTE) and qualification for state licensure.	Although overall NPTE pass rates remained strong, a decline in first-time pass rates identified a need for earlier identification of students who may require additional preparation before attempting the licensure examination.	Although overall NPTE pass rates remain high (96.9-100%), recent declines in first-time pass rates indicate a need for earlier intervention. Requiring a score of at least 600 (73%) on an early mock NPTE exam helps identify weaknesses sooner, supports targeted remediation, and strengthens first-time licensure readiness and student confidence.	Implemented a practice mock NPTE examination requiring students to achieve a minimum score of 600 (73%) prior to taking the National Physical Therapy Examination (NPTE). Results were used to identify areas requiring additional preparation and support licensure readiness.	Eight students successfully achieved the established benchmark of at least 600 (73%) on the mock NPTE examination. The program subsequently reported an NPTE pass rate of 90.5% in 2023 and 85% in 2024 and remained in compliance with CAPTE requirements. Faculty will continue to monitor mock examination and NPTE results to evaluate student licensure readiness and identify areas for additional improvement.

Program/Degree	Assessment Year	Program Learning Outcomes/Student Learning Outcomes	Assessment Finding/Concern	Analysis of Assessment Results	Improvement Action Taken	Results of Improvement Action
Veterinary Assistant TC	2022-2023	PLO 4- Demonstrate ability to assist with common veterinary procedures involving companion animals.	Although overall applied skill achievement was strong, assessment results identified variation across measures related to common veterinary procedures, indicating a need for continued reinforcement of hands-on skills and consistent performance.	Faculty analysis showed that 90100% of students met applied skill outcomes overall; however, variation across individual measures identified opportunities to strengthen consistency in PLO 4. Faculty determined that continued hands-on practice and assessment of animal handling, restraint, and other common veterinary procedures would reinforce skill mastery and preparation for clinical practice.	Increased opportunities for students to practice and demonstrate skills related to common veterinary procedures, including animal handling and restraint, with continued assessment of PLO 4 through laboratory, clinical, and course-based measures.	2024 assessment results showed improvement in multiple PLO 4 measures. In VTA 145, 77.77% of students received an excellent or good rating for animal handling skills from their clinical rotation site, increasing from 72.7%. The VTA 140 course passage rate increased from 60% to 91.6%. In VTA 151, 95.65% of students successfully demonstrated dog or cat restraint, compared with 100% previously, indicating sustained high achievement despite a slight decline. Faculty will continue to monitor PLO 4 results to support consistent skill development across cohorts.
Mechatronics AAS/TC	2022-2023	PLO 1- The graduate will have demonstrated a thorough understanding of the electrical components, electric motors, and mechanical components in a mechatronics system.	Exit exam results showed low achievement of PLO 1, with only 43% of students meeting the outcome. Performance related to mechanical components was also low at 46%, identifying this content area as a priority for improvement.	Faculty analysis of the assessment results identified mechanical component knowledge as an area requiring additional reinforcement. Faculty also noted that the exit exam was not graded, which may have affected student effort and performance. Providing graded, course-integrated practice using industry-aligned Siemens questions was identified as a strategy to strengthen student knowledge and provide a more meaningful measure of learning.	Developed an eLearn module and graded quiz using Siemens sample questions from the Mechanical Components course to provide additional practice and assessment aligned with PLO 1 and industry expectations.	Follow-up assessment in MECH 2320 showed 100% achievement of PLO 1. This result demonstrates strong student achievement following implementation of the course-integrated eLearn module and graded quiz. Faculty will continue to monitor PLO 1 results to determine whether this level of achievement is sustained across future cohorts
Nursing AAS	2022-2023	PLO 4- Clinical Decision Making: Evaluate outcomes of clinical decisions implemented to provide safe and effective evidence-based nursing care.	The transition to the Next Generation NCLEX in April 2023 identified a need to provide students with experience using the new question formats and clinical judgment assessment methods prior to taking the licensure examination.	Faculty determined that nursing assessments needed to more closely reflect the Next Generation NCLEX format. Providing students with repeated exposure to NGN-style questions would familiarize them with the new testing format, while providing faculty with additional assessment data to monitor student performance and licensure readiness.	Implemented ExamSoft for nursing examinations beginning Spring 2023 to provide students with experience using NCLEX-style testing formats and strengthen faculty's ability to administer and analyze assessment results.	The implementation goal was met. ExamSoft was successfully implemented in Spring 2023, and students successfully learned and utilized the testing platform. Faculty are now able to administer examinations using NCLEX-style formats and more effectively track and analyze student assessment data. Future PLO 4 and NCLEX results can be reviewed to determine the impact of the new assessment approach on student learning and licensure readiness.
